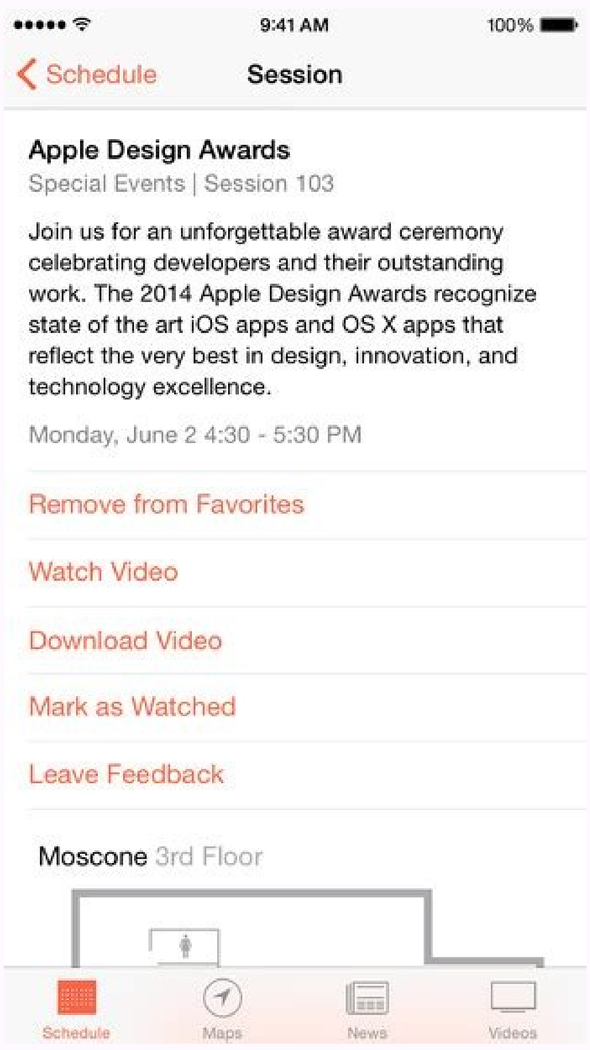
Apple iphone 6 plus operating manual release times



The challenge ahead

The demands driven by smart phones and tablet PCs are expected to fuel the growth of small to medium size panel market in the coming year. However, Taiwan manufacturers need to improve their display technology and also their yields to compete with Japan and Korean manufacturers. Besides, as more Taiwan workers are lured with high salaries and great benefits by China companies, Taiwan manufacturers must find out a way to keep their talented people and to seek advancing their professional skills in order to write another success story.

In terms of small-sized products, the 1-inch to 5-inch sizes are available from Taiwan suppliers. The displays with 1-inch to 3-inch are applied for industrial applications like kiosk information displays. As for the smartphones, enlarged display size and resolution are two major R&D trends to follow. The available sizes for smartphones are enhanced from 3-inch and 4-inch to the 5-inch size.

The mainstream size for the smartphone display is 4.3-inch size where is the major battlefield for AMOLED and LTPS TFT LCD displays since 2011. The 4.8-inch, 5.3-inch and 5.5-inch are other three markets to compete. At present, LTPS technology is dominant; however, AMOLED is seen to keep up or even surpass in the years to come. Witsview points out that an AMOLED panel with touch function for a mainstream 4.3-inch smartphone display is only 30 to 35 percent higher in price to a LCD panel with touch function of the similar size; however, the price difference between 7-inch AMOLED and LCD panels for tablet PCs can be 90 percent high.

The current mobile phones are equipped a-Si, LTPS, AMOLED and STN displays. No doubt, the OLED display is positioned as the high-end market by 2015. The major application for OLED is still the smartphone which can afford the high cost for the high-quality display. We can see a growing trend of increase shipment on smartphones. So far, 15 to 20 percent of smartphones are equipped with OLED displays. Nowadays, the AMOLED technology is uprising at the introduction stage with high cost and low yield rate. However, its thinner form factor and fast response time are two major advantages over the LCD technologies. To be detailed, the OLED display emits light itself without backlight unit to achieve power-saving and slim form factor which are essential to the portable electronic devices. To the LCD technology, AMOLED display is a new competitor without advantages in pricing and production scalability. However, its born thinness and high visual quality makes it a definite threat. In comparison with OLED and TFT LCD displays, the OLED technology edges out the TFT LCD over vivid color presence, high contrast and free viewing angle. The OLED technology supports no gamut change at different gray levels, constant high contrast when viewing angle changing, and free viewing angle unlike TFT LCD technology supporting +/-180 degree viewing only.

AU Optronics (AUO) is the leading supplier of OLED displays in Taiwan. The company introduced the world's first AMOLED product for mobile phones in 2006, and released 4-inch flexible AMOLED displays and 32-inch AMOLED displays in 2011. Co-working with SONY, AUO released 56-inch 4K2K IGZO OLED TVs in 2012. AUO says AMOLED technology features ultra-high speed performance, winning over the TFT-LCD technology. For instance, AMOLED features free of motion blur with fast response time; its Motion Picture Response Time (MPRT) of 120Hz AMOLED is closed to TFT-LCD with 240Hz frame rate. Being endowed with wide temperature feature, it maintains fast response in low temperature environment, <10 μsec at and below 25°C. The TFT-LCD performs 2 to 200 ms instead.

The high cost and low yield rate are two major hurdles to the mass adoption

The AMOLED display production is concentrated in 5.5G and below. In comparison with TFT LCD, the number of tablet PC panels cut from glass substrates is much lower, and the cost is higher. The TV market is one of the most important markets to panel makers besides the smartphone's. However, the TV prices are three times higher than LCD TVs so far. Witsview predicts the pricing of OLED TVs can still be two times higher in three years with a rather slow growing popularity. However, that more TV suppliers are anticipating he 2014 is regarded as a driving force to push the adoption rate. As for the PC-related segments like tablets, notebooks and desktop PC monitors, the penetrate rate is relatively low because they are price-sensitive and low-cost oriented. Take the tablet PC for an example, the Witsview indicated that the low-

Apple iphone 6 operating system.

Or read our Product Environmental Reports for detailed information on the environmental performance of every Apple product. Customized suggestions based on recipient and app are not available for Chinese (Simplified, Traditional), Japanese, Korean, and Thai. See www.apple.com/ios/whats-new for iOS 9 compatible devices. Speeds are based on theoretical throughput and vary based on site conditions. Availability over a cellular network depends on carrier policies; data charges may apply. Application and service availability and pricing are subject to change. All battery claims depend on network configuration and many other factors; actual results will vary. Internet access required. *To identify your iPhone model number, see . Learn more about iPhone and the Environment iPhone 6 and iPhone 6 Plus embody Apple's continuing environmental progress. For details on LTE support, contact your carrier and see www.apple.com/iphone/LTE Siri may not be available in all languages or in all areas, and features may vary by area. Click here to see complete list. Data plan required. iOS 9 will be available as a free download beginning September 16. Downloading apps requires an Apple ID. Recycling Apple takes a holistic view of materials management and waste minimization. In CA and RI, sales tax is collected on the unbundled price of iPhone. Service may not be available in all areas or at the signal strength, rates, speeds, or bandwidth as demonstrated. B (800, 1700/2100, 1900, 2100 MHz) UMTS/HSPA+/DC-HSDPA (850, 900, 1700/2100, 1900, 2100 MHz) GSM/EDGE (850, 900, 1800, 1900 MHz) LTE (Bands 1, 2, 3, 4, 5, 7, 8, 13, 17, 18, 19, 20, 25, 26, 28, 29) Model A1586*/ Model A1524* CDMA EV-DO Rev. Wireless broadband recommended; fees may apply. Battery has limited recharge cycles and may eventually need to be replaced by Apple service provider. iPhone 6 may ship with iOS 8. Some features may not be available for all countries or all areas. Some features may require added fees.
